

One piece lug design with extended neck and a concentric disc and seat configuration to allow for 2" - 48" of piping installation. Rated for bubble-tight shutoff for bi-directional service to 232 psi on sizes 2" - 12" and to 145 psi on sizes 14" - 48".

J Flow Controls **84A Series** Wafer Style Butterfly Valve

FEATURES & BENEFITS

- | Small in size and light in weight. Easy installation and maintenance. It can be mounted in any direction
- | Simple and compact construction, quick 90° on-off operation
- | Minimized operating torque, energy saving
- | Bubble-tight sealing with no leakage under pressure test
- | Wide selection of materials, applicable for various medium
- | Long service life
- | Flow curve tending to straight line. Excellent performance

Overview

Body:

- One piece lug design with extended neck to allow for 2" - 48" of piping insulation
- Non-corrosive bushing and a self-adjusting stem seat. No field adjustment necessary to maintain optimum field performance

Disc:

- Disc edge and hub on metal disc are spherically machined and hand polished for torque and maximum sealing capability

Stem:

- One piece design
- Disc to stem connection is a square shaft design with no possible leak paths in the disc-to-stem connection. External disc to stem connections such as disc screws and pins are absent
- Stem is mechanically retained in the body neck and no part of the stem is exposed to the line media

Seat:

- Tongue-and-groove seat with primary hub seal and a molded flange O-ring for weld neck and slip-on flanges
- The seat is totally encapsulated isolating it from the line media and no flange gaskets are required

84A Series Wafer Style Butterfly Valve

Flow Rate Calculation

Note: Values indicated in this page is for information purposes

Liquids

$$Q = \frac{KV}{\sqrt{\frac{PS}{\Delta P}}}$$

Q rate of flow (m3/h)
PS specific gravity (water=1)
 ΔP pressure drop (bar)

Gas

$$Q = 28.5 \frac{KV}{\sqrt{\frac{PS}{P_2 \Delta P}}}$$

Q rate of flow (m3/h)
PS specific gravity (water=1)
 ΔP pressure drop (bar)
(less than 1/2 inlet pressure)
P2 outlet pressure

Steam

$$Q = 22.5 \frac{Kv \sqrt{P_2 \Delta P}}{\sqrt{\frac{PS}{\Delta P}}}$$

Q rate of flow (Kg/h)
 ΔP pressure drop (bar)
(less than 1/2 inlet pressure)
P2 outlet pressure

Calculation of the rate of flow equivalent to H2O

For different liquid, gas or steam head losses are determined by equivalent water of flow, as follows:

- Qe equivalent water flow (mc/l o l/s)
- Q fluid flow (mc/l o l/s)
- d fluid specific gravity (Kg/mc)

84A Series Wafer Style Butterfly Valve

Installation

1. Leave a space between flanges so that valve can be easily inserted and removed and move the valve in accordance with the arrow

2. Open completely the valve before tightening flanges

3. Tighten bolts until flanges are in contact with valve body

4. NOTE: do not insert other packing between flange and valve

NOTE: Weld the pipe only in spots with the valve between flanges. Remove the valve before finishing the welding to avoid that heat damaging the seat. Clean welding carefully to avoid that slags damage the seat.

Installation for powders and muddy fluids

- Wrong
- Vertical rotation axis

- Right
- Horizontal rotation axis

End piping installation

When valves are installed at the end of piping, a counterflange as per drawing type B is needed to secure tightness at max pressure. Please notice the order when the valves are installed as per drawing type A.

- Type A installation without end piping

- Type B installation with end piping

Pressure max: Type A installation is 174 psi; Type B installation is 232 psi
